

What is claimed is:

1. A disposable absorbent article having a first region and a second region, a pair of opposing end edges, a pair of opposing side edges extending between said pair of end edges and a lateral centerline disposed between said pair of opposing end edges, said disposable absorbent article comprising a liquid pervious topsheet having an outer surface and an inner surface, a liquid impervious backsheet joined to said topsheet, an absorbent core positioned between said topsheet and said backsheet, and a fecal management member which is present only in said second region, formed of a separate layer and positioned immediately adjacent said inner surface of said topsheet, wherein said first region is defined by one of said pair of opposing end edges and said lateral centerline and said second region is defined by the other one of said pair of opposing end edges and said lateral centerline, wherein said topsheet within said second region has a plurality of apertures with an effective size greater than 0.1 square millimeters and an effective open area of at least about 12 percent, and wherein said outer surface of said topsheet within said second region comprises an effective amount of a skin care composition which is semi-solid or solid at 20° C and which is partially transferable to a wearer's skin.
2. The absorbent article of Claim 1 wherein said topsheet within said second region has an effective open area of at least 15 percent.
3. The absorbent article of Claim 1 wherein said topsheet with said second region has an effective open area of at least about 20 percent.
4. The absorbent article of Claim 1 wherein said topsheet within said second region has a plurality of apertures with an effective size greater than 0.2 square millimeters.
5. The absorbent article of Claim 1 wherein said topsheet within said second region has a plurality of apertures with an effective size greater than 0.5 square millimeters.
6. The absorbent article of Claim 1 wherein said topsheet within said second region has a plurality of apertures with an effective size greater than 1.0 square millimeters.

7. The absorbent article of Claim 1 wherein the skin care composition comprises a petroleum based emollient selected from the group consisting of mineral oil, petrolatum, and mixtures thereof.
8. The absorbent article of Claim 1 wherein said skin care composition comprises an immobilizing agent, said immobilizing agent having a melting point of at least about 40°C.
